(Must be 14 or greater)

**New WH efficiency rating/index _____
(Must be 0.91 or greater)

**New heat pump size in tons _____
(Must be 1 ton or greater)

**Attach documentation to application.

Attach copy of invoice or receipt including model no., serial no., installation address, and date.

Signature _____

Date _____

**City of New Bern Ordinances
Section 6, Electrical Equipment
Load Management
Paragraph 7, Appliance Rebate Policy**

Effective February 1, 1996, the City initiated its Residential Appliance Rebate Program for heat pumps and water heaters to reward customers for replacing their old and inefficient heating and air conditioning systems or water heaters with new energy efficient electric appliances. Effective with building permits issued 7/1/02, new construction will no longer be eligible for rebates. A \$400 rebate credit is offered per central heat pump (minimum 14 SEER rating and at least one ton) for replacement units. This rebate applies to total electric heat pumps only; units which utilize gas or other fossil fuel in any way (including hybrid units) will not be eligible for a rebate regardless of SEER rating. A \$150 rebate credit is offered per high efficiency water heater (minimum 0.91 energy factor) for replacement units. Load management switches must be installed on these appliances. Customers must request a rebate credit for installing the energy efficient heat pumps and water heaters by completing a Rebate Request Application and submitting the appropriate documentation to the City of New Bern. After inspection and approval of a Rebate Request Application form by the electric utility, the rebate credit will be applied to the customer's electric account. If necessary, the load management switches can be removed from these appliances, but if the customer requests that the switches be removed within two years of the date that the rebate credit is issued, then the full amount of the rebate credit will be charged back to the customer's electric account. A request for switch removal after two years but within four years of the date that the rebate credit is issued will result in one-half of the rebate credit being charged back to the customer's electric account. A request for switch removal after four years from the date that the rebate credit is issued will result in none of the rebate credit being charged back to the customer's electric account. Under any circumstance that the customer requests that the switches be removed, the customer will no longer be eligible to participate in the Energy Efficient Residential Rate Schedule 07 with the corresponding 5% energy discount.

I have read and understand the City of New Bern Appliance Rebate Policy:
